

[ASPIRATION & PROBLEM]

Enterprise AI is stuck.

01	02	03	04
Provenance	Amnesia	Sovereignty	Accountability

FIG.01 · SPECIMEN

CORE SAMPLE / 2026

STATE · STUCK

v0.9 · ADVISORY BRIEF

[THE OBSTACLE]

From answers to autonomous **actions.**

WAS	IS BECOMING
Episodic question and answer	Continuous, ambient intelligence

STAKES
Risk surface expands exponentially

[A BETTER WAY]

OSI organized networks. OIA organizes intelligence.

1984 OSI

A durable structural vocabulary let the industry scale because everyone spoke the same language.

2026 · DRAFT OIA

An architecture designed from the ground up for persistence, autonomy, and consequence.

[INDUSTRY FRAMING]

AI produces intelligence. OIA makes it **operate**.

NVIDIA AI Stack			JENSEN @ GTC
#	LAYER	DESCRIPTION	
5	AI Economy	Enterprises as AI factories producing intelligence.	
—	Implicit / not defined	Operating layer left unspecified.	
4	AI Applications	Copilots and agents performing work.	
3	AI Platforms	CUDA and software frameworks.	
2	AI Models	Foundation models across domains.	
1	AI Infrastructure	Accelerated compute systems.	

Jensen defines how intelligence is produced. OIA defines how it persists, acts, and can be trusted.

Open Intelligence Architecture			FULL SYSTEM
#	LAYER	DESCRIPTION	
9	Human Interface	Human-agent interaction surface.	
8	Continuity Fabric	Persistent memory and identity.	
7	Orchestration	Agent workflows and tool coordination.	
6	Context / Knowledge	RAG and grounding systems.	
5	Inference	Execution and retrieval patterns.	
3	Agent Data	Governed transaction layer.	
0	Physical Compute	Data center and chips.	

Microsoft is telling the same **production story.**

Girish's framing — “Investing for the next wave of agentic AI” — anchors on silicon, datacenter, compute and networking, Kubernetes + AI, and hybrid / edge / sovereign cloud. A hyperscaler's view of the **infrastructure for intelligence.**

WHAT IT COVERS

Infrastructure & platform for producing intelligence.

WHAT IT OMITS

Orchestration. Context. **Continuity.** Human interface.

[]

Hybrid, edge, sovereign cloud	05
Kubernetes + AI	04
Compute, networking, storage	03
Datacenter architecture	02
Silicon	01

Every major player describes the **production stack.**
None of them own the operating stack — that is the gap OIA closes.

[PROOF]

Durable architecture for the enterprise.

01	Vendor-neutral	No hyperscaler lock-in
02	Composable	Swap layers, not stacks
03	Complete	Bare metal to browser
04	Durable	Outlasts any product cycle

[HORIZON]

Designed to **outlast** any
single technology wave or
hyperscaler product cycle.

— DRAFT SPECIFICATION · V0.9

[DRAFT MODEL]

The Open Intelligence Architecture.

↑ HUMAN

↓ PHYSICAL

LAYER 09	Human Interface	The interaction surface	
LAYER 08	Continuity Fabric	Cognitive state and memory	
LAYER 07	Orchestration	Workflows and tool coordination	
LAYER 06	Context & Knowledge	Grounding and perception	
LAYER 05	Inference & Retrieval	Model execution and queries	
LAYER 04	Model Training	Continuous adaptation	
LAYER 03	Agent Data Substrate	Persistent, auditable data	
LAYER 02	Sovereign Infrastructure	Jurisdictional control	
LAYER 01	Silicon Abstraction	Hardware portability	
LAYER 00	Physical Compute	Power, cooling, facilities	

[SAFETY MODEL]

Prevention requires coherence.

Evaluate behavior before execution — not after detection.

Prevention asks: **does this make sense at all?**

Not: have we seen this before?

STILL REQUIRED

Fallback protection.

01 **Guardrails** — permissions and sandboxing

02 **Observability** — logs and traces

03 **Detection** — reactive response to incidents

CONTINUITY LAYER · MEMORY + IDENTITY + AUDIT ENABLES COHERENCE

[LAYER 08 · DEEP DIVE]

What lives inside the Continuity Fabric.

CONTINUITY FABRIC

Memory

Persistent state across sessions and workflows.

Identity

Consistent understanding of who is acting and why.

Audit

Traceable reasoning and decision history.

Learning Constraints

Adaptation that is bounded, reversible, and safe.

Continuity turns intelligent outputs into **accountable systems**.

Enables coherence across time, context, and action.

WITHOUT THIS LAYER

Intelligence without accountability.

01 Stateless agents

02 Untraceable decisions

03 Drift over time

04 No system accountability

THE OPERATING LAYER JENSEN'S STACK LEAVES UNSPECIFIED

[FUTURE HORIZON]

Adopt.
Ratify.
Champion.

— FOR THE AGENTICS FOUNDATION

[MANDATE]

- 01 Take ownership of the model.
- 02 Ratify as a vendor-neutral specification.
- 03 Establish a formal contribution process.
- 04 Certify reference implementations.
- 05 Evangelize as the enterprise standard.

STRATEGY · 2026 — 2029

[CONCLUSION]

5

Five **questions** to answer next.

[OPEN QUESTIONS]

- Q · 01

How do we prevent hyperscaler monopolies from collapsing Layers 5–8 into proprietary black boxes?
- Q · 02

Who governs certification of compliance and verifiable memory at Layer 8?
- Q · 03

How will incumbent cybersecurity and data vendors map their legacy products to this new stack?
- Q · 04

What is the sustainable funding model for the Foundation's long-term stewardship of OIA?
- Q · 05

How do we drive global regulatory alignment so OIA becomes the default compliance framework?
